

TECHNICAL SPECIFICATIONS

ROMAN SHADES

features and benefits

- casual contemporary styling for informal settings
- soft horizontal folds provide neat stacking to maximise aesthetic attractiveness when opened
- available in a range of fabric alternatives from blackout to translucent depending on the project requirements
- some are fire retardant fabrics (see fabric specifications for details)
- four alternate models available to suit all applications

Applications

Internal installations where heat, light and/or privacy control are required e.g. offices, boardrooms and common areas.

Colour Range

There are a vast number of fabric ranges in the Hunter Douglas Commercial Roman Shades collection, with the number of colours in each ranging from 3 to 15. For large quantities and with sufficient lead time, custom colours are available.

Durability

The colour fastness of the fabric is 6-7 Blue Scale (where maximum score is 7) (AS 2001.4.21). The aluminium battens on Roman Shades are unaffected by moisture and are corrosion resistant. The operating hardware has been cycle tested to ensure long term performance.

Energy Benefits

Window treatments that are tight fitting to the window and made from closely woven fabrics, provide one of the most effective ways to prevent heat transmittance through windows. Roman Shades can be fitted in the window reveal and have no gaps between panels that would otherwise allow warm air to escape. Select a blackout or room darkening fabric, with a white or light colour facing the window for optimum energy performance. Extraflocke, Cambridge and Serene room darkening fabrics come in a range of colours, some specifically selected for the Commercial environment and have a neutral flocked backing for superior heat rejection.

Quality

Hunter Douglas Limited, the supplier of Hunter Douglas Commercial Roman Shade fabrics and components, is a quality endorsed company, certified as complying with the requirements of AS/NZS ISO 9001:2000.

Woven in Australia

Most fabrics in the Hunter Douglas Commercial collection are woven and coated in Australia. Hunter Douglas Commercial Roman Shades are made to measure in Australia.

WINDOW COVERINGS

CLASSIQUE® Roman Shades

The CLASSIQUE® Roman Shade System uses a simple, elegant extrusion system, to create clean folds in the fabric.

Signature Roman Shades

The Signature Roman Shade System uses timber battens to provide additional texture and style.

Impression Roman Shades

New Impression Roman Shades offer a sleek timeless appearance. The system uses a side operated cordlock.

Ballina Roman Shades

Ballina Roman Shades utilise a continuous chain operation for ease of raising and lowering the shade. The geared operation lightens the load and makes raising and lowering blinds easier.

Part One - General

Scope

SUPPLIER: Finish and install Hunter Douglas Commercial Roman Shades (Premium Quality)

Submittals

PRODUCT DATA: Manufacturer's descriptive literature shall be submitted indicating materials, finishes, construction and installation instructions and verifying that product meets requirements specified. Manufacturer's recommendations for maintenance and cleaning shall be included.

Delivery, Storage and Handling

Product shall be delivered to site in manufacturer's original packaging. Product shall be handled and

stored to prevent damage to materials, finishes and operating mechanisms.

Job Conditions

Prior to shade installation, building shall be enclosed. Interior temperature shall be maintained between 15°C and 32°C during and after installation; relative humidity shall not exceed 80%. Wet work shall be complete and dry.

Warranty

5 Year Commercial Warranty for specified products. See warranty for details.

Part Two - Product

Hunter Douglas Commercial Roman Shades

Acceptable Manufacturer:

Hunter Douglas Commercial

338 Victoria Road, Rydalmere NSW 2116

Telephone: 1300 733 078

Website: www.hunterdouglascommercial.com.au

Material

Manufactured from Woven Polyester/Polymer Coated Fibreglass. Some fabrics are treated with SANITIZED® Antimicrobial Protection and DURAGUARD® Fabric Protector.

Headrail

The CLASSIQUE® Roman Shade and Impression Roman Shade headrail shall be manufactured from polymer covered timber, 33mm x 19mm in dimension. Available in Light Beige and Metallic. The headrail is co-ordinated with the fabric, for a less obtrusive appearance and the polymer coating protects the timber from the ingress of moisture. Ballina Roman Shades utilise a powder coated steel channel 33mm x 36mm in dimension.

Operation

The Ballina Roman Shade shall be operated using the chain drive; to raise, pull the front of the blind and to lower, pull the back of the chain. Impression Roman Shades and CLASSIQUE® Roman Shades

shall be operated by pulling the cord down together and towards the centre of the shade. To lock off in any position, simply move the cord to the outer edge to engage the cordlock.

Integrated Pelmet

Hunter Douglas Commercial CLASSIQUE® Roman Shades are finished with an integrated pelmet. This serves the function of covering the operating hardware and provides a neat finish to the blind. The hardware is therefore hidden from both the interior and exterior view, unlike some other roman shade designs.

Panel Sizes

The top panel is approx 280mm for CLASSIQUE® Roman Shades and approx 200mm for Ballina Roman Shades and Impression Roman Shades. The other panel sizes will vary depending on the drop of the blind.

Panel Configuration

The Roman Shade shall fold in such a manner that the front face of the fabric is never exposed to the sun.
