Hunter Douglas Commercial introduces superior new Sunscreen Fabrics

Hunter Douglas Commercial, the innovative and technologically advanced supplier of commercial window coverings, has designed two new Sunscreen Fabrics - **GREENSCREEN® NRG** and **NOVASCREEN®** Sunscreens.

Genevieve Marshall, Marketing Manager, Hunter Douglas Commercial comments “Hunter Douglas Commercial Greenscreen NRG Sunscreen is the latest innovative product under the Greenscreen ‘umbrella’ - joining Greenscreen Generation which launched in 2007. At the same time, we are also pleased to introduce Novascreen Sunscreen which has dual sides for maximum end benefit.”

“Hunter Douglas Commercial remains committed to producing new, innovative products that offer superior heat and reflecting properties, assisting in maintaining an energy efficient environment, without blocking the view.”

Hunter Douglas Commercial Greenscreen NRG Sunscreen is woven from a 100% Trevira polyester yarn, providing inherent fire retardant properties. With a seven per cent openness factor¹, the fabric has superior heat and reflection properties. It has also been tested and meets the maximum VOC (volatile organic compound) content criteria specified by the Green Building Council of Australia (IEQ-11).

Hunter Douglas Commercial Novascreen Sunscreen is woven from PVC coated fibreglass with a broken twill weave design – creating an openness factor of only three per cent². This fabric is dual sided with alternative light and dark sides. The benefit of this design is that the dark side offers good visibility and glare reduction while the light side, which will face out of the building, offers heat control.

Novascreen Sunscreen complies with the general requirements of the Building Code of Australia for Fire Hazard Properties of materials in buildings.

¹ Dependant on colour chosen

² Dependant on colour chosen

Greenscreen NRG is available in six plain and six metallised colours in a 2.4 metre width suitable for Roller Blinds or Panel Glide applications. Novascreen Sunscreen is available in ten modern colours in a 2.5 metre width suitable for Roller Blinds, Panel Glide or Roman Shades applications. Both of these sunscreen fabrics achieve a rating of six to seven on the blue scale for UV colour fastness, ensuring they will not fade.

Both fabrics are part of the MULTIVISION® Concept whereby Hunter Douglas Commercial offers tone matched fabrics in varying opacities, allowing different light control fabrics to be used on different parts of a building, yet with a consistent appearance throughout.

For further information on these exciting new products, contact Hunter Douglas Commercial on 1300 733 078 or visit www.hunterdouglascommercial.com.au.
